

Light Aircraft Association

# SYWELL 2019

## SPEAKERS CORNER

*Welcomes*

Keith Vinning

Saturday 16.00 to 17.00

### PilotAware

Keith has been involved with the cost effective PilotAware electronic conspicuity device from its early beginnings as a kit of parts utilising the Raspberry Pi single board computer.

The product has seen constant development and functionality, being available today as a plug and play device that interacts either directly or via ground stations, with a wide range of other e/c systems. One thing has always remained a constant however, exceptional value for money.

Keith will highlight the functionality of today's PilotAware and new ideas and technologies being investigated to continually improve the product.
